*"The House Famous for Lawn Grass Seed"*

## *"Making and Maintaining a ~ Perfect Lawn ~"*

**N**OTHING is more beautiful or more universally desired than a well kept lawn. To obtain such requires intelligent preparation and care before the proper turf may be established. In order that this may be done, selection of the best seed and materials is necessary, and the insistence on same will determine whether quality and permanency expected are obtained.

The area to be sown should first be plowed or dug, then thoroughly harrowed or raked to properly pulverize the soil, also seeing that all clods, stones, roots, etc., are removed. During this process a proper grading of the area should be made, being certain that at least five inches of good soil covers the entire surface and that the subsoil allows for sufficient drainage. At this stage an application of Burnett's Lawn Top Dressing should be applied at the rate of 1,000 lbs. per acre and raked in. Sheep Manure or Bone Meal may also be used in the same proportion, but Barnyard Manure is not usually recommended unless very old and well rotted as it is likely to contain weed seeds.

Grass seed of the highest quality, mixed in the proportions of the various grasses suitable to the soil, location and particular requirements, should be chosen. (A complete list of highest grade separate grasses and grass seed mixtures for various purposes is found in the following pages.) The seed should be sown on as calm a day as possible to allow even distribution. On large areas it is more practical to use a seed sower.

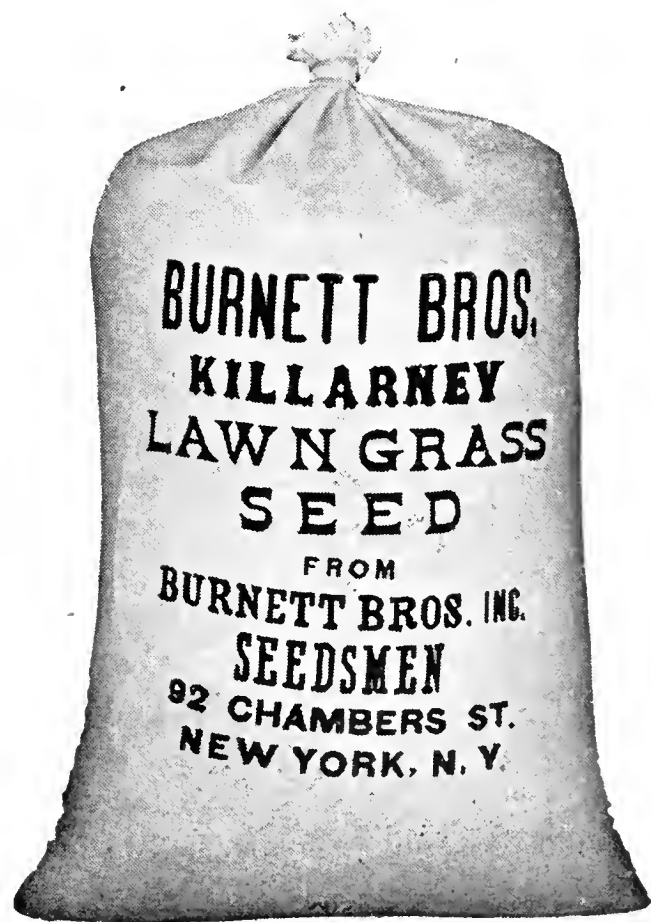

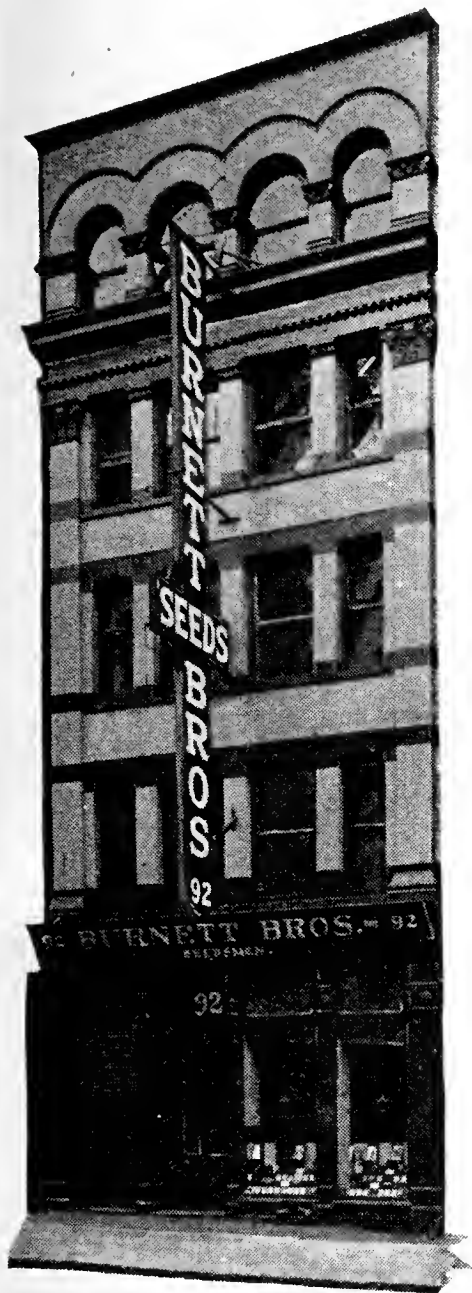

After sowing, the ground should be raked lightly in order to cover the seed, then rolled. It is very necessary that the newly seeded lawn should not

be allowed to dry out, and frequent watering must be done until the young grasses are well established. To obtain a good turf, we recommend sowing at the rate of 125 lbs. (approximately 6 bushels) of lawn grass seed to the acre, or where a small quantity is required sow 1 lb. to each 400 square feet. (20 ft. x 20 ft.)

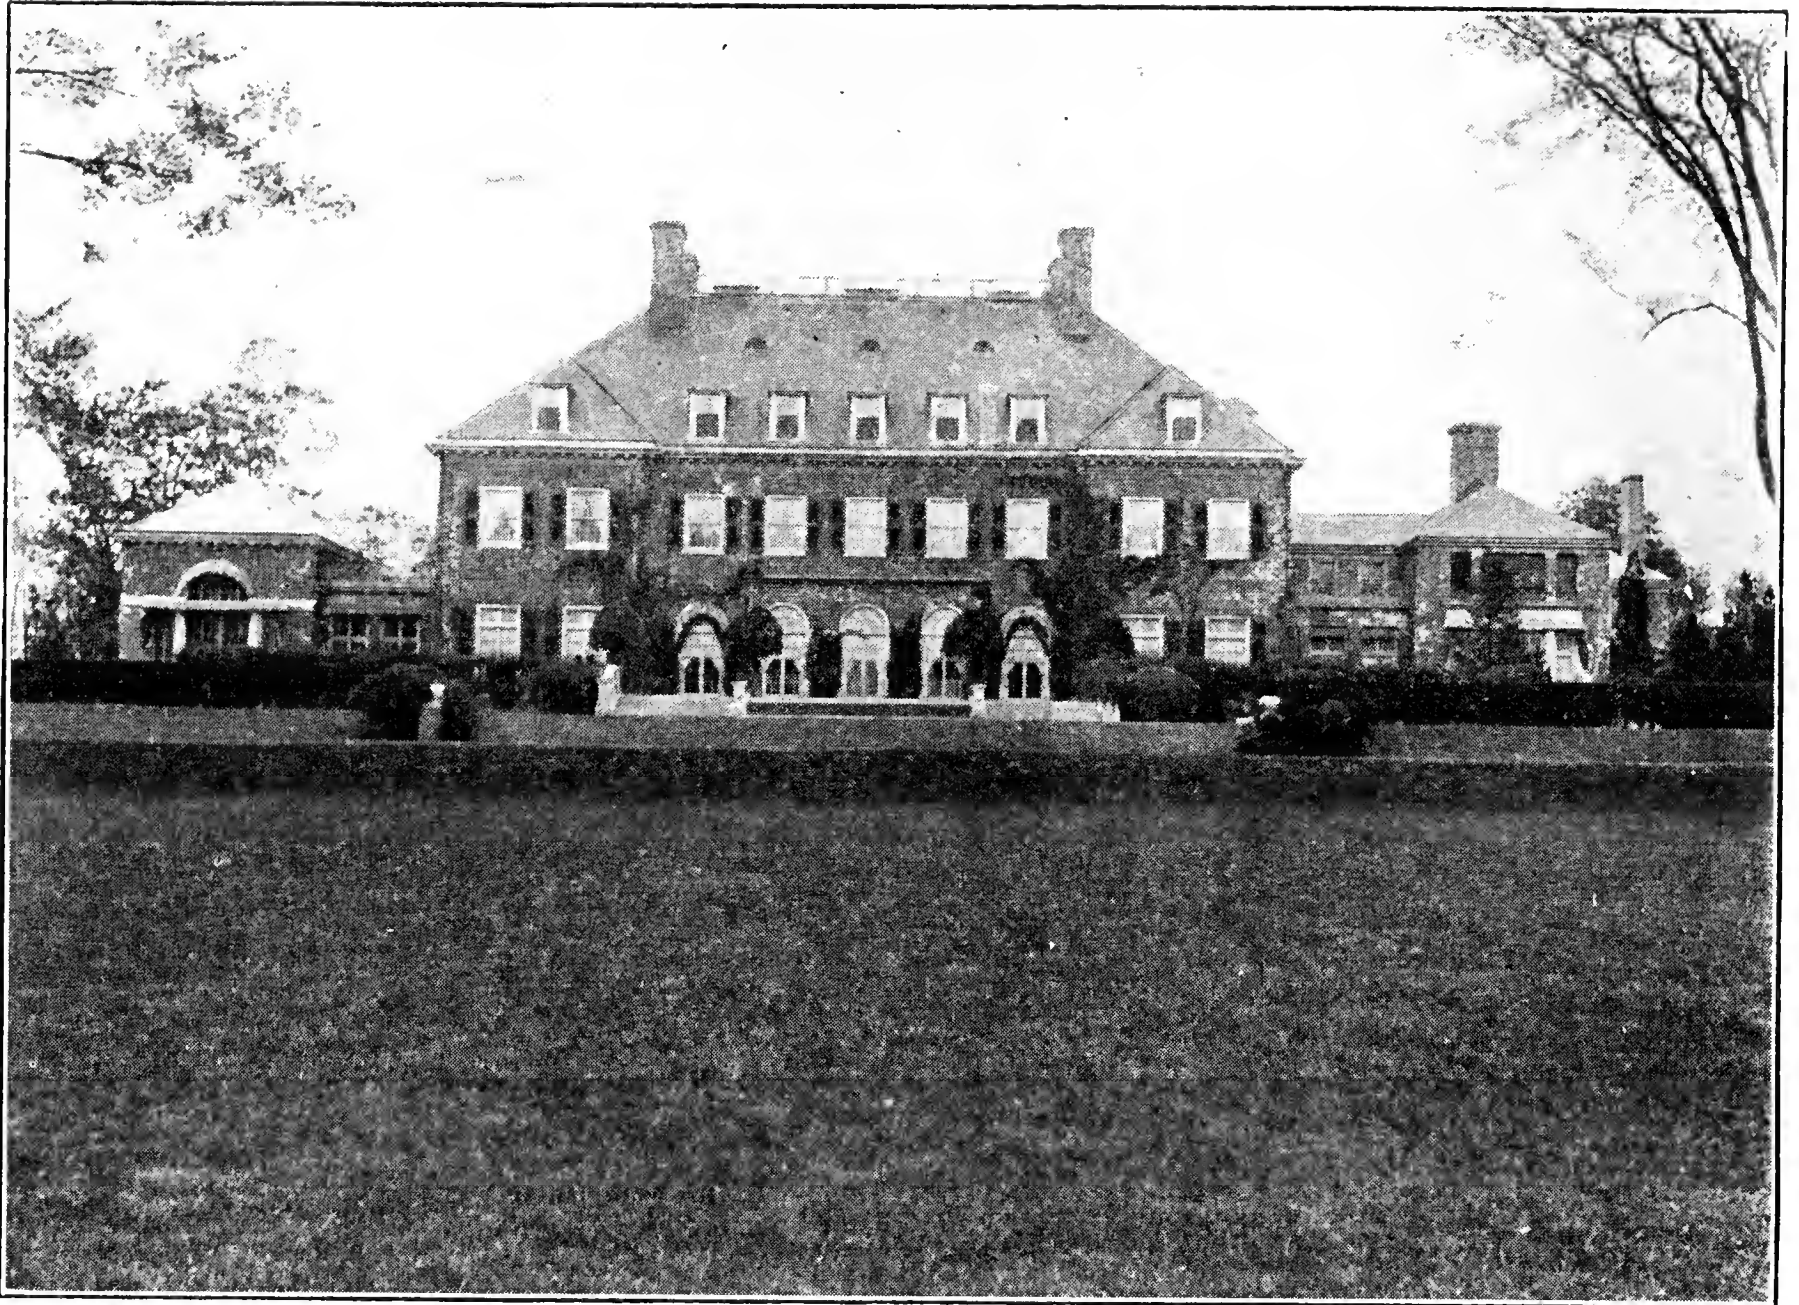

Lawns are usually made in early Spring so that the benefit of the seasonable rains may be had and the grass become well established before the hot Summer arrives, or else in the early Fall, generally in late August or early September while there is still warmth enough for the germination of the seed.

Renovating of old lawns should also be done during these seasons. In an area to be renovated, weeds should be dug out, bare spots loosened up and low spots filled with top soil to make an even surface. Sow seed where necessary and roll lightly. Generally about half the quantity of seed is needed for renovation purposes that is used in making new lawns.

To maintain a lawn in a high class condition at all times it is advisable to use about one-half ton of Burnett's Lawn Top Dressing per acre annually. This application should be applied preferably in the early Spring.

## Burnett's "Special" Lawn Grass Mixture

The above mixture is made from our own formula, and composed of grasses specially adapted for the purposes of producing turf which retains its rich green color and velvety appearance throughout the entire Summer and Fall. In making up this high grade mixture we are careful to use only the very finest quality of all the most desirable dwarf evergreen, recleaned grasses, free from chaff and weeds, which thrive well on any soil, thus ensuring a beautiful and permanent lawn.

1 lb., 50c., 2½ lbs., \$1.25, 5 lbs., \$2.50, 10 lbs., \$4.75, 20 lbs., \$9.00, 100 lbs., \$40.00.

*(20 lbs. of Burnett's "Special Mixture" is approximately one bushel.)*

## Burnett's "Killarney" Mixture

Burnett's Lawn Grass Seed Mixture "Killarney" is composed of a combination of the very finest European grasses and fescues, the highest grades possible to procure, and specially adapted for this climate. This mixture is composed of all solid, recleaned seeds of the highest germination. Therefore, owners of large estates requiring a permanent sod and everlasting lawn should by all means use this high-grade mixture. If the ground is properly prepared, we are certain "Killarney Mixture" will produce a turf of velvet, equal to the most famous Lawns in Europe. Give it a trial. "Sow Killarney and walk on Velvet."

1 lb., 60c., 2½ lbs., \$1.40, 5 lbs., \$2.75, 12½ lbs., \$6.75, 25 lbs., \$13.00, 100 lbs., \$50.00.

*(25 lbs. of "Killarney Mixture" is approximately one bushel.)*

## Burnett's "Central Park" Mixture

This well-known mixture contains a large proportion of permanent grasses that grow quickly, producing a rich, green sward in about four weeks from time of sowing. "Central Park" is very hardy and has always given entire satisfaction in any location wherever sown.

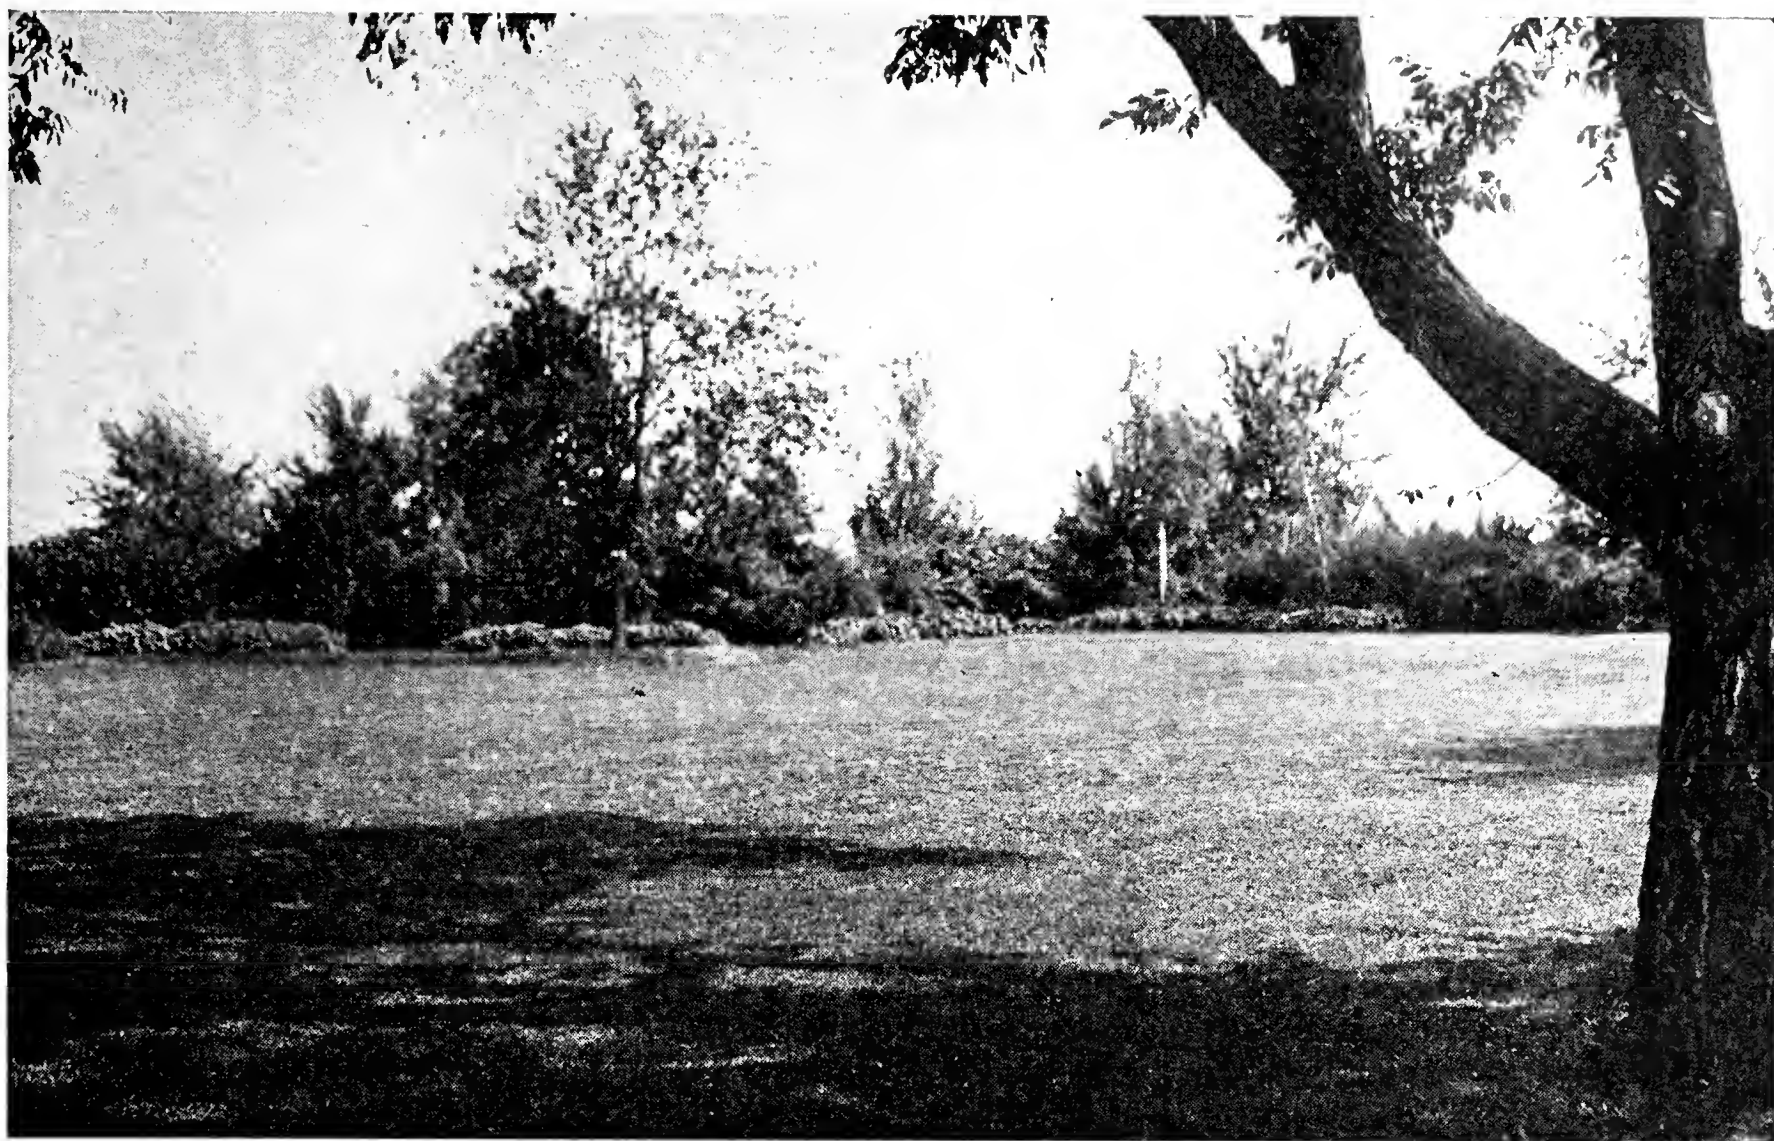

1 lb., 45c., 2½ lbs., \$1.10, 5 lbs., \$2.10, 10 lbs., \$4.00, 20 lbs., \$7.50, 100 lbs., \$35.00.

*(20 lbs. of "Central Park Mixture" is approximately one bushel)*

# Burnett's Lawn Grass Seed Mixtures

View showing Lawn sown with Burnett's "SHADY PLACE" Lawn Grass Seed Mixture.

## Burnett's "Shady Place" Mixture

When a lawn is much shaded, either in whole or in part, the shaded portions should be sown with Burnett's "Shady Place" Lawn Grass Seed Mixture, which is a combination of fine, dwarf-growing evergreen varieties, which, in their wild or natural state, are to be found growing in the woods or other sheltered or shady places. Under or in the immediate neighborhood of large trees fertilizers should be applied liberally and frequently, for the trees absorb the fertilizer and impoverish the ground. Ground much shaded is very frequently sour, and if the drainage is defective it is apt to be covered with moss. In such cases an application of lime or wood ashes raked in will sweeten the soil, but the moss should be first removed with a sharp steel-toothed rake.

1 lb., 60c., 2½ lbs., \$1.40, 5 lbs., \$2.75, 10 lbs., \$5.25, 20 lbs., \$10.00, 100 lbs., \$45.00.

(20 lbs. of Burnett's "Shady Place Mixture" is approximately one bushel.)

## Burnett's "Bank and Terrace" Mixture

On sloping banks it is often necessary to use sod, as heavy rains wash the soil off before the grass seed has time to germinate. It is sometimes even necessary, in sodding very steep banks, to use pins eight or ten inches in length to pin the sods in place, to prevent them from being washed down by excessive rains before the grass roots have had time to fasten in the soil. The Terrace mixture which we offer is composed of deep-rooting grasses which, if once established, will hold the soil and prevent washing, and we advise liberal fertilizer and seeding so that the grasses may be quickly established.

1 lb., 60c., 2½ lbs., \$1.40, 5 lbs., \$2.75, 10 lbs., \$5.25, 20 lbs., \$10.00, 100 lbs., \$45.00.

(20 lbs. of Burnett's "Bank and Terrace Mixture" is approximately one bushel.)

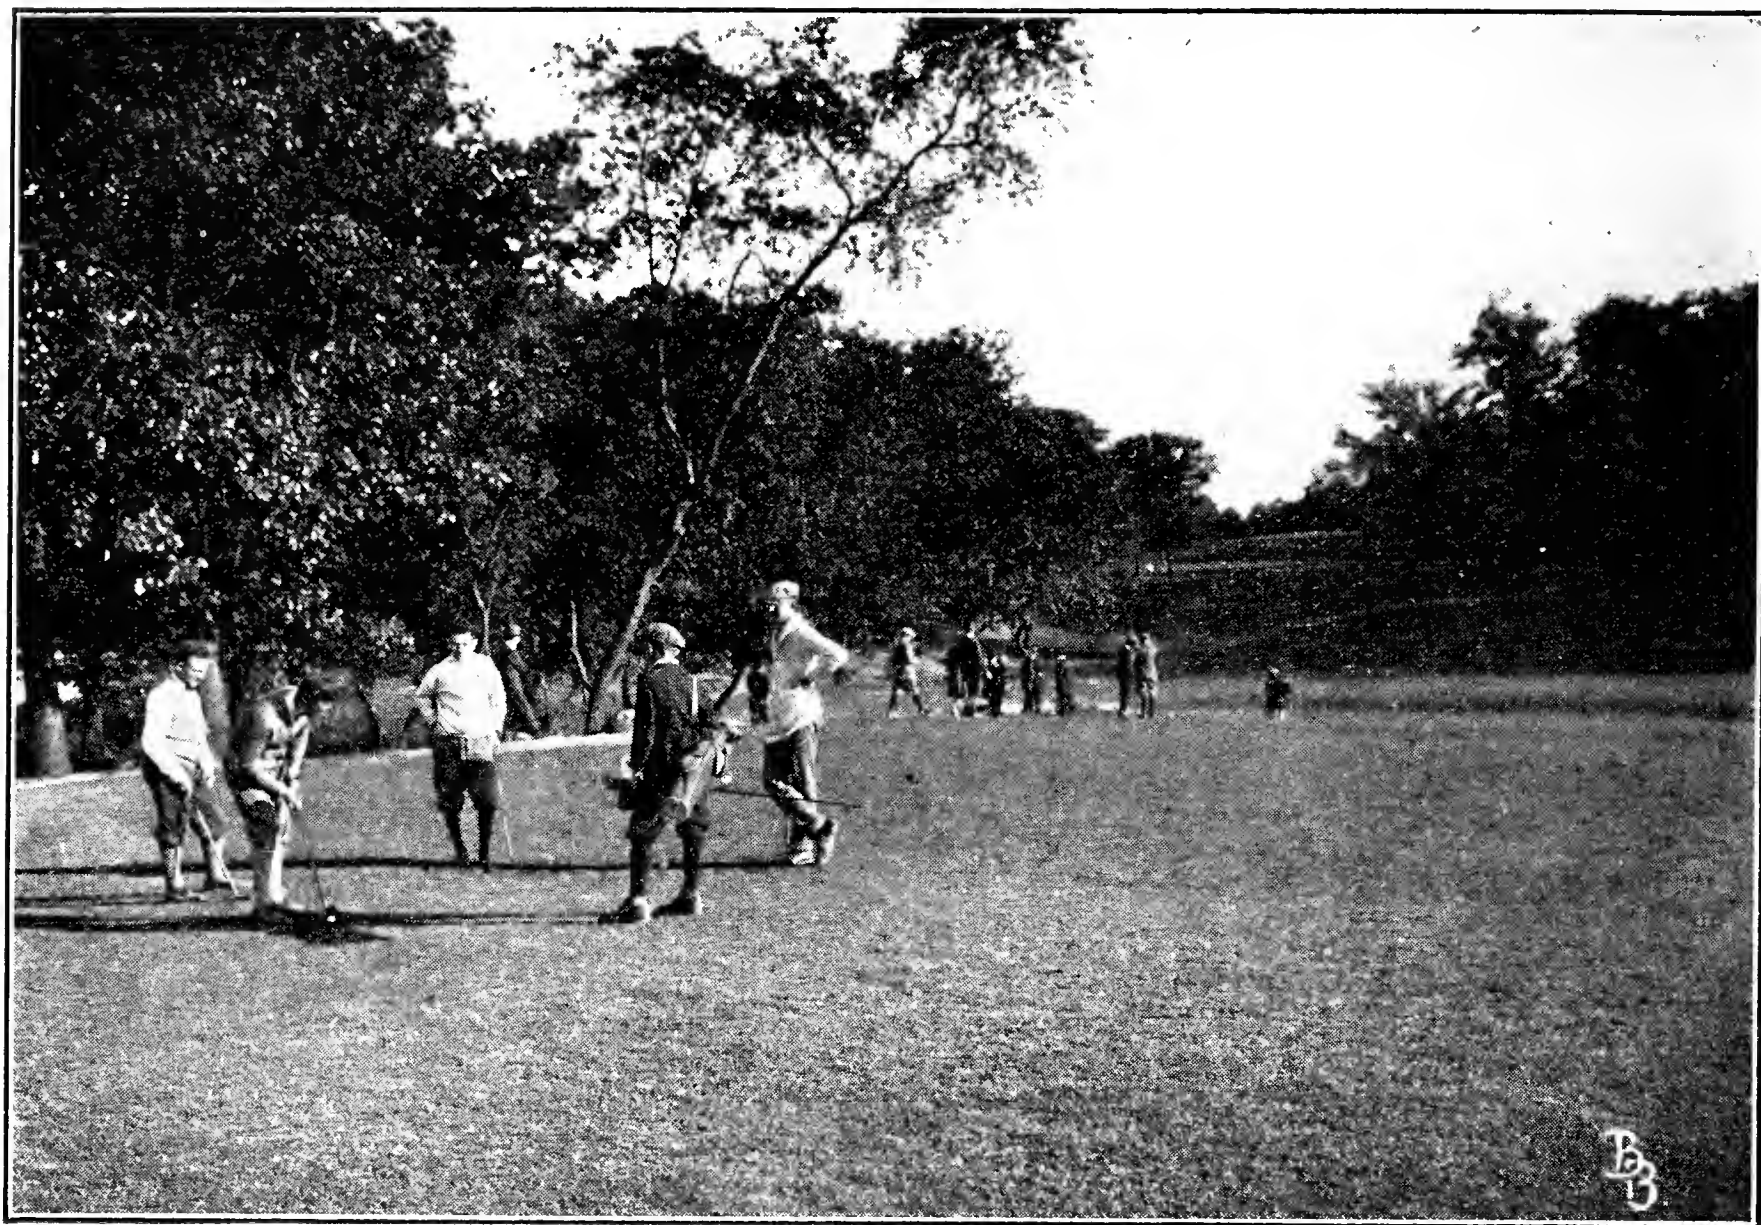

## Burnett's "Seashore" Mixture

If a few inches of top soil is spread over the surface, and well firmed, an application of Burnett's Special "Seashore" Mixture will produce a good lawn in six or eight weeks. An occasional application of pure Sheep Manure during the spring, summer and fall months will increase the strength and color of the grass. Our formula has been thoroughly tested out in various localities. If the soil is exceptionally poor, and it is not possible to apply a layer of top soil, White Clover will help to make the sod thick, and also protect the grass.

5 lbs., \$2.50, 10 lbs., \$4.75, 20 lbs., \$9.00, 100 lbs., \$40.00.

(20 lbs. of Burnett's "Seashore Mixture" is approximately one bushel.)

# BURNETT'S GRASSES AND CLOVERS

## FOR HAY, MEADOWS AND PERMANENT PASTURES

**O**UR Permanent Pasture, Hay and Meadow Mixtures are composed of varieties of grasses best adapted for producing an abundant and nutritious food supply for stock. Our formulas are arranged with great care and the mixtures are made to suit the exact location and condition of soil, etc., for which they are needed.

Nothing but the best re-cleaned seeds are used, consequently it does not take so large a quantity per acre as that generally used when poor quality mixtures are sown.

We recommend four bushels to one acre, which may be sown either in the Spring or Fall, with an additional ten pounds of Mixed Clovers sown early in the Spring. When ordering please state whether for high, dry, medium, wet or heavy soil.

# NOVELTIES AND SPECIALTIES IN FLOWER SEEDS

All gardening enthusiasts are more or less interested in something new in the floral world, and for this reason we keep in touch with all new introductions as they appear from year to year. The few novelties and specialties offered have been selected by us as having a good claim to merit and are well worthy of a trial.

## **AGERATUM, "Blue Cap"**

Undoubtedly the best dwarf Ageratum yet offered. The flowers are much larger than those of Little Blue Star, and of a richer and deeper color. Pkt. 50c.

## **ANEMONE, ST. BRIGID, "Creagh Castle Strain"**

Anemones, especially the St. Brigid variety, have now attained great popularity. The flowers are exceptionally large, and the range of colors exceptional. Pkt. 50c.

## **ANCHUSA, Annual "Blue Bird"**

This recent introduction has become deservedly popular. The flowers are a vivid indigo blue. Height 18 inches. Pkt. 25c.

## **ANCHUSA ITALICA, "Feltham Pride"**

Beautiful as is the colour of the Anchusa in the Spring and early Summer borders, it has the disadvantage of a rather straggling habit of growth. Feltham Pride is, however, of a much less spreading habit than either the Dropmore or Lissadell varieties, and moreover bears larger flowers and of a brighter blue. Pkt. 50c.

## **AQUILEGIA, PEARSON'S CRIMSON STAR**

This remarkable novelty combines all the charm of the ordinary Aquilegia with other qualities, which make it more effective as a garden plant. Its flowers are very large with crimson sepals and spurs, and white petals; an entirely new colour in Aquilegias; shows very little variation when grown from seed. Pkt. 50c.

## **BROWALLIA, Viscosa Compacta, "Sapphire"**

A compact type of this valuable conservatory plant. Grows not more than 9 or 10 inches high, and is very floriferous, with dark Lobelia blue flowers. Pkt. 50c.

## **CALENDULA, Double Art Shades**

New tones and shades of this popular annual. Contains delicate apricots, beautiful picotees, in fact every shade from creamy white to deep orange. Pkt. 35c.

## **CALENDULA, Chrysantha**

A new departure in Calendulas. The flowers, of a clear buttercup yellow, bear a striking resemblance to a Chrysanthemum. Unusually long stemmed. Pkt. 35c.

## **CALENDULA, Radio Golden Beam**

A Golden replica of Radio. Of great value for cutting. Pkt. 35c.

## **ANNUAL CANTERBURY BELLS**

After many years of selection, we are able to offer a strain which will bloom within 6 months from time of sowing. This strain is obtainable in mixture only, but contains all the colors of this popular flower. Pkt. 35c.

## **CARNATION, CHABAUD'S GIANT IMPROVED**

We offer the following colors in an improved strain of this popular carnation. The plants are of robust habit, usually blooming in about five months from seed. The percentage of doubles is high.

Cardinal Red, Crimson, Flesh Pink, Salmon Rose, White, Yellow. Pkt. 50c.

# Burnett's Reliable Flower Seeds

A well planned Old-fashioned Garden

Our list of Flower Seeds has again been carefully revised and comprises only the choicest and most selected types in their respective classes, which we are certain will give satisfaction.  
One of the most fascinating and economical ways of making a flower garden is in raising the plants from seed.

Flowers that can be raised from seed are divided into 7 classes, viz:—

- H. A.—Hardy Annuals.** Seeds sown outdoors where they are to bloom; they die after the first year.
- H. H. A.—Half Hardy Annuals.** Those that are sown under glass in the early Spring and transplanted outdoors in April and May.
- H. B.—Hardy Biennials.** Seeds sown outdoors and bloom the next year; some bloom the first year if sown early.
- H. H. B.—Half Hardy Biennials.** Seed sown one year under glass and planted outdoors the following Spring.
- H. P.—Hardy Perennials.** Seeds sown outdoors one year, bloom the next and each succeeding year without protection.
- H. H. P.—Half Hardy Perennials.** These bloom from seed the second year, but need winter protection thereafter.
